

Jira Installation

Navigate to Jira

<https://www.atlassian.com/software/jira/download>

The screenshot shows a web browser with multiple tabs. The active tab is titled "Jira - (x)" and the address bar shows the URL "https://www.atlassian.com/software/jira/download". A purple arrow points from the address bar to a purple-bordered box containing the text "Navigate to this URL". The page header features the Atlassian logo and navigation links for Products, For teams, and Support. Below the header, there are links for Jira Software, Features, Enterprise, and Pricing, along with "Try free" and "Buy now" buttons. The main heading is "Download Jira Software Server", followed by the subtext "Self-host with Server for more customization and control, or deploy at scale with Data Center". A yellow icon with a plus sign and three smaller icons is visible on the left. The main content area is titled "Try it free" and includes the text "30 days" and "Unlimited users". There is a dropdown menu showing "OS X" and a "Download" button.

Accept License Agreement

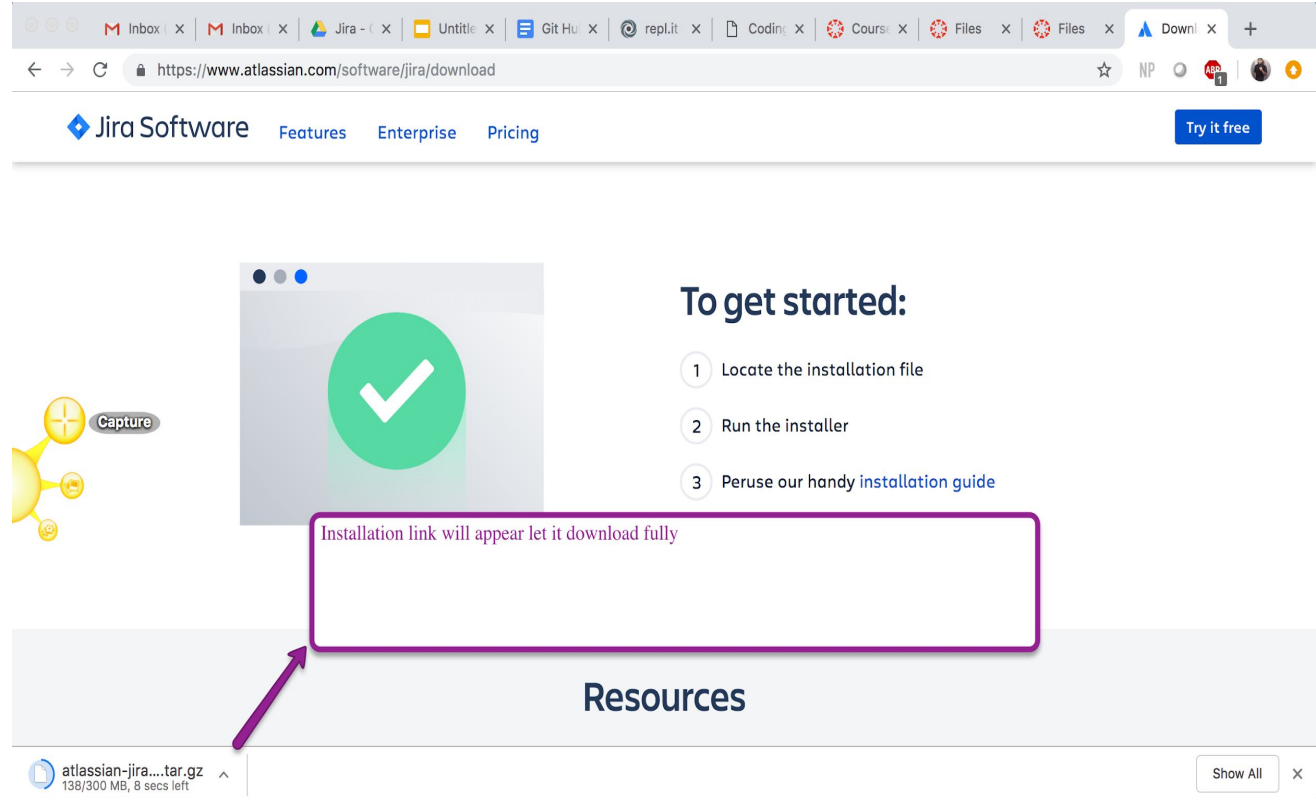

Click on “I agree to the Atlassian Software License”

Then Click Get Started

File Downloading

The folder should start
Downloading

The screenshot shows the Jira Software download page. A purple callout box with a purple arrow pointing to the 'Resources' section contains the text: "Installation link will appear let it download fully".

To get started:

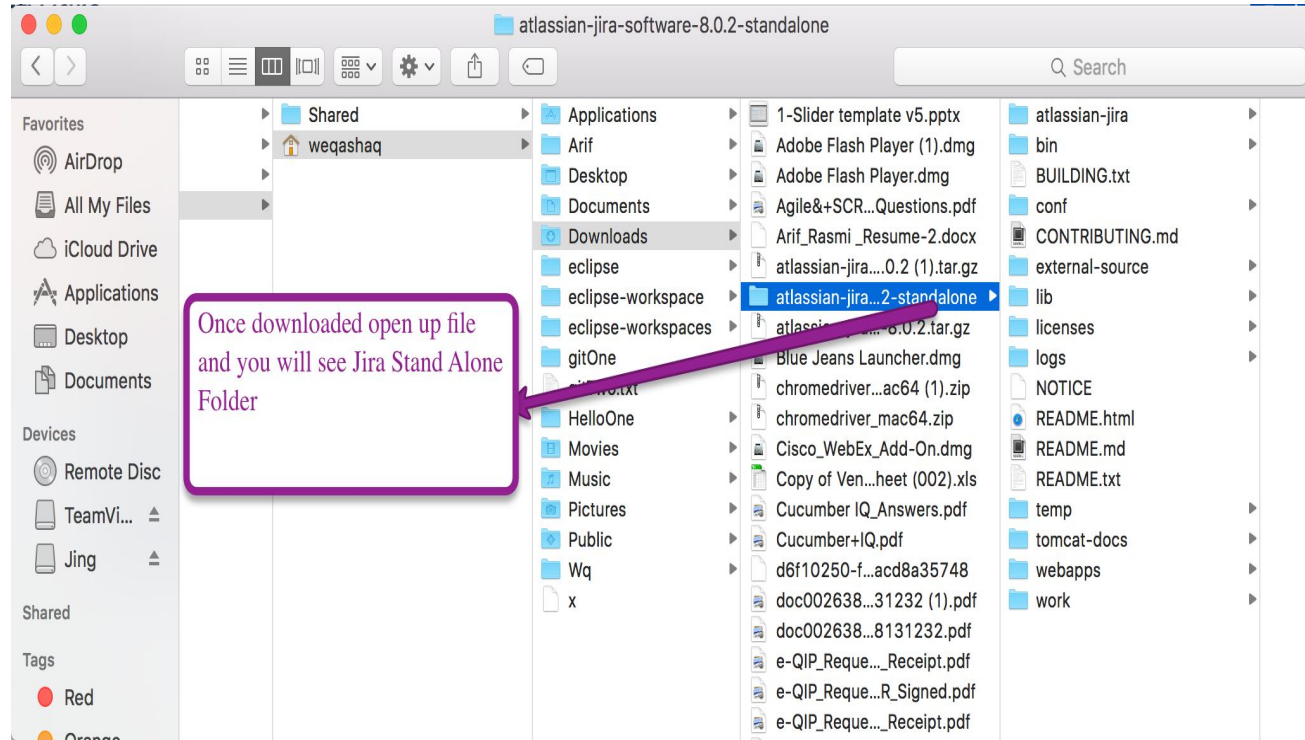

- 1 Locate the installation file
- 2 Run the installer
- 3 Peruse our handy [installation guide](#)

Resources

atlassian-jira....tar.gz
138/300 MB, 8 secs left

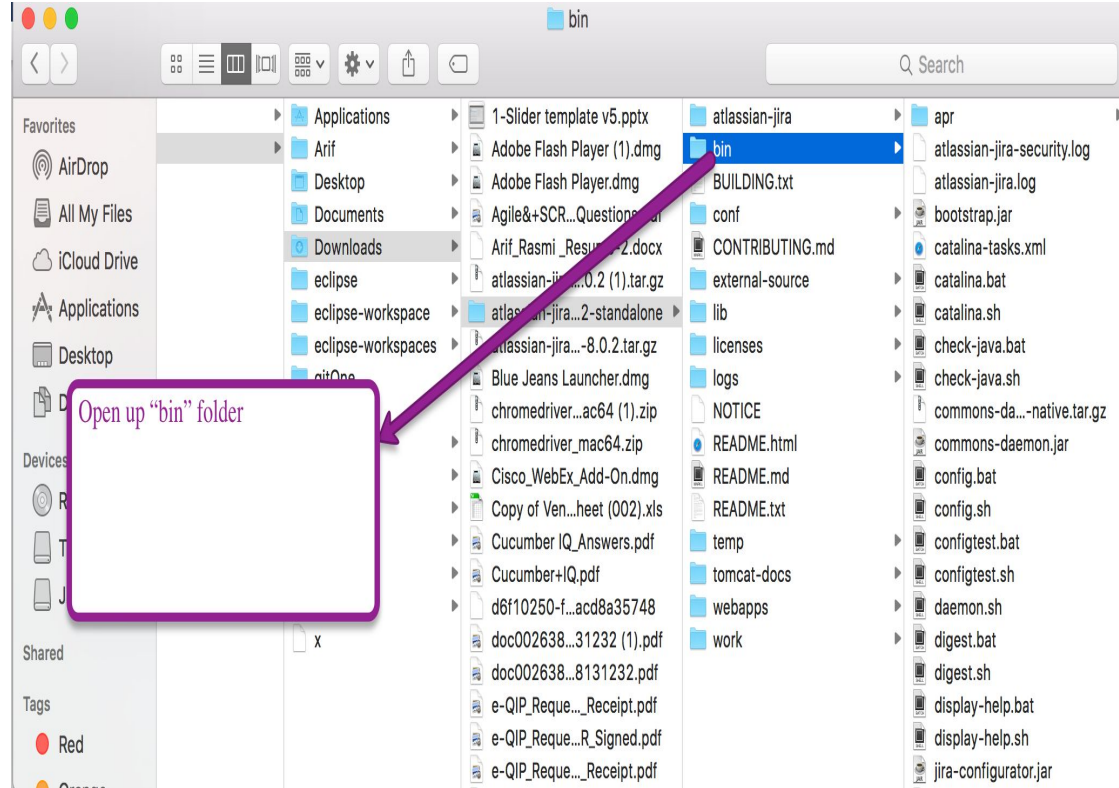

Atlassian folder in Downloads folder

Go to downloads and
find atlassian-jira folder

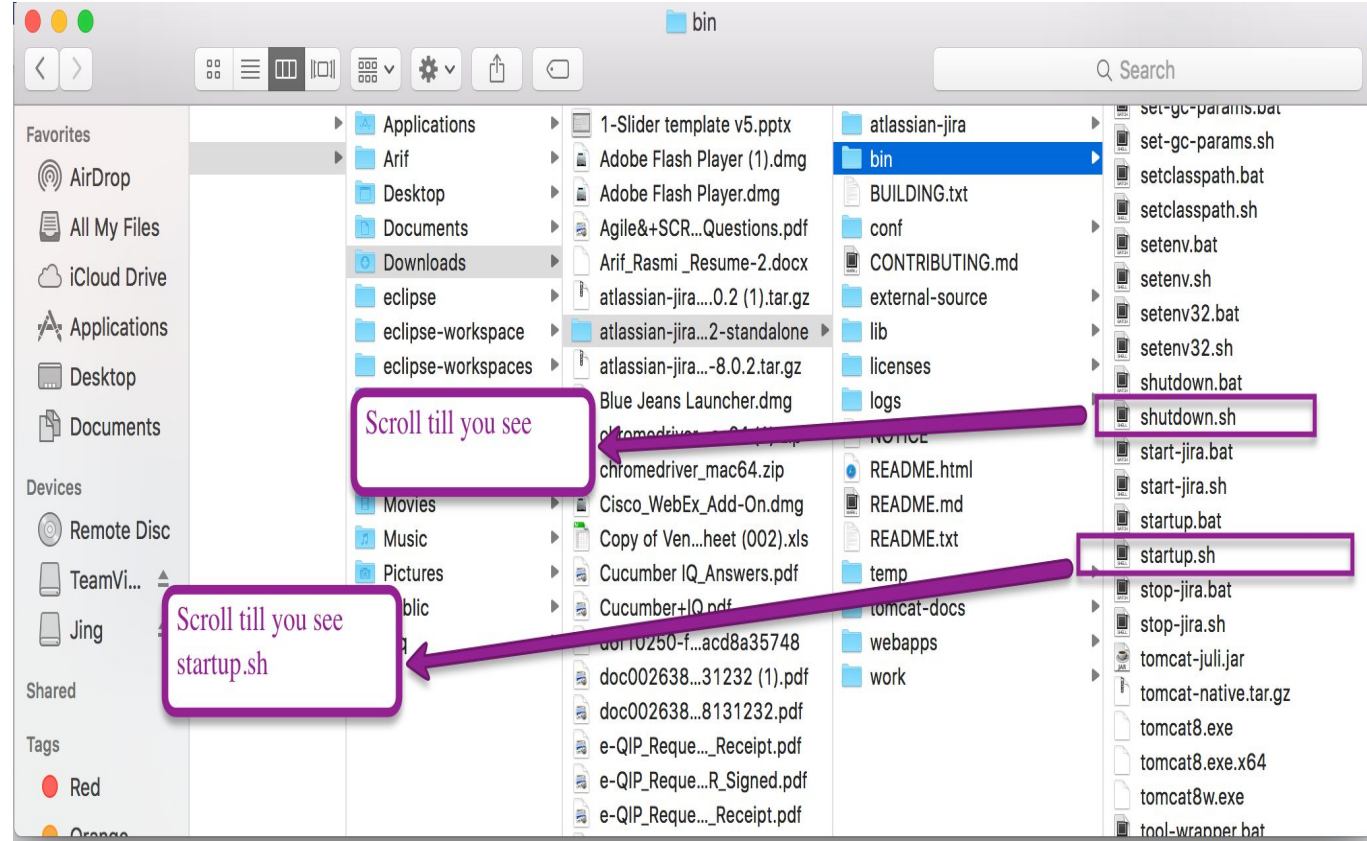

Open bin Folder

Open up bin folder that is within atlassian folder

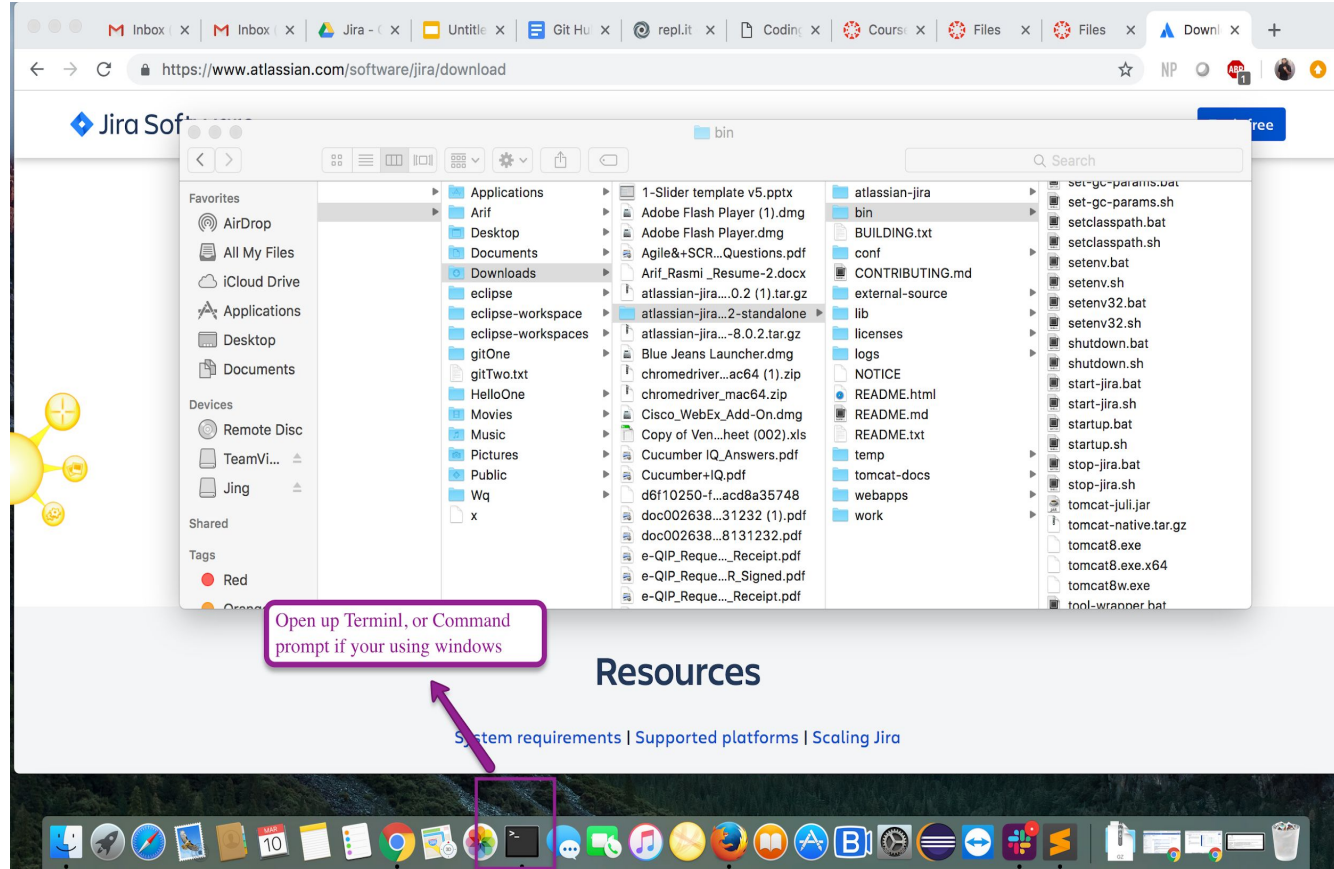

Scroll until you see these two files

Scroll till you see
shutdown.sh &
startup.sh

Open up Terminal(Command Prompt)

Open up
Terminal(Command
prompt)

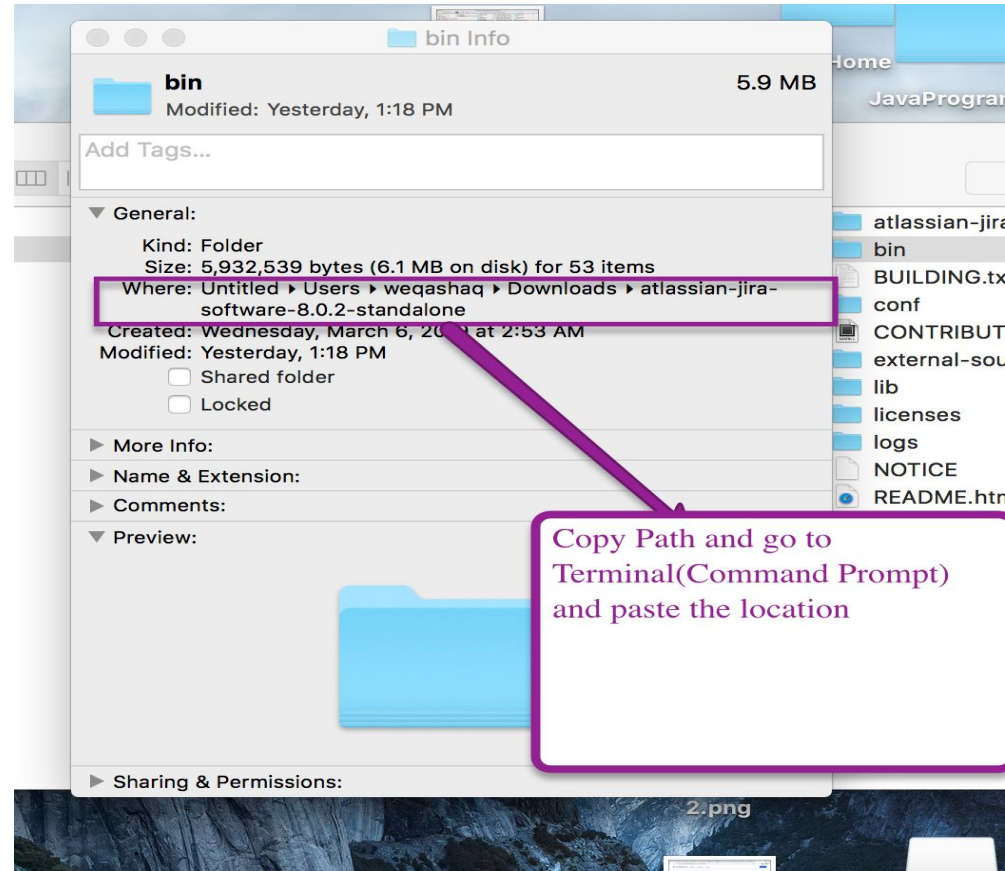

Resources

[System requirements](#) | [Supported platforms](#) | [Scaling Jira](#)

Get location of atlassian-jira folder

Right click on folder and get info then select from Untitled to Standalone for the location of the folder(Mac)

For windows you must use file explorer and do the same but copy the file path from the search bar

Go Back To Terminal

Go back into terminal(Command Prompt) then type in cd and paste location

A screenshot of a macOS terminal window. The title bar shows a home icon, the name 'weqashaq', and the shell '-bash' with window dimensions '137x24'. The terminal text shows a sequence of commands: first 'cd ~' which returns the prompt to '~', and then 'cd /Users/weqashaq/Downloads/atlassian-jira-software-8.0.2-standalone' which returns the prompt to the full path. A purple arrow points from the second command line down to a text box.

```
weqashaq — -bash — 137x24
Weqass-MacBook-Pro:bin weqashaq$ cd ~
Weqass-MacBook-Pro:~ weqashaq$ cd /Users/weqashaq/Downloads/atlassian-jira-software-8.0.2-standalone
```

Paste location onto your Terminal and make sure your navigaing to your folder path

Type in bin for your path

Type in cd bin to navigate to the bin folder

A terminal window titled "atlassian-jira-software-8.0.2-standalone — -bash — 137x24". The terminal shows the following commands and output:

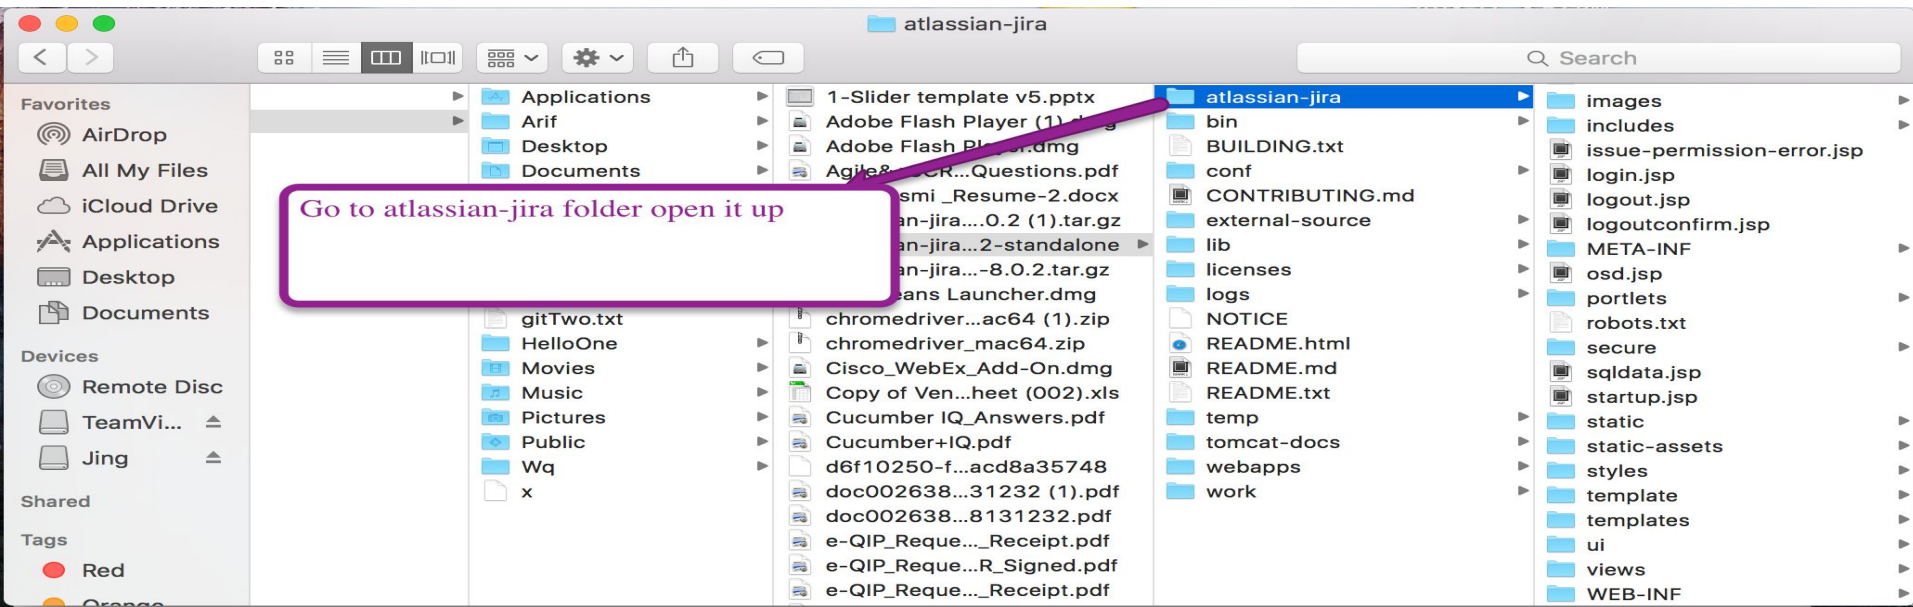

```
Weqass-MacBook-Pro:bin weqashaq$ cd ~  
Weqass-MacBook-Pro:~ weqashaq$ cd /Users/weqashaq/Downloads/atlassian-jira-software-8.0.2-standalone  
Weqass-MacBook-Pro:atlassian-jira-software-8.0.2-standalone weqashaq$ ls  
BUILDING.txt  README.html  atlassian-jira  external-source  logs  webapps  
CONTRIBUTING.md  README.md  bin  lib  temp  work  
NOTICE  README.txt  conf  licenses  tomcat-docs  
Weqass-MacBook-Pro:atlassian-jira-software-8.0.2-standalone weqashaq$ cd bin
```

The "bin" folder in the ls output is highlighted with a purple box. A purple arrow points from this box to a callout box below.

Once you see bin folder navigate to your bin folder

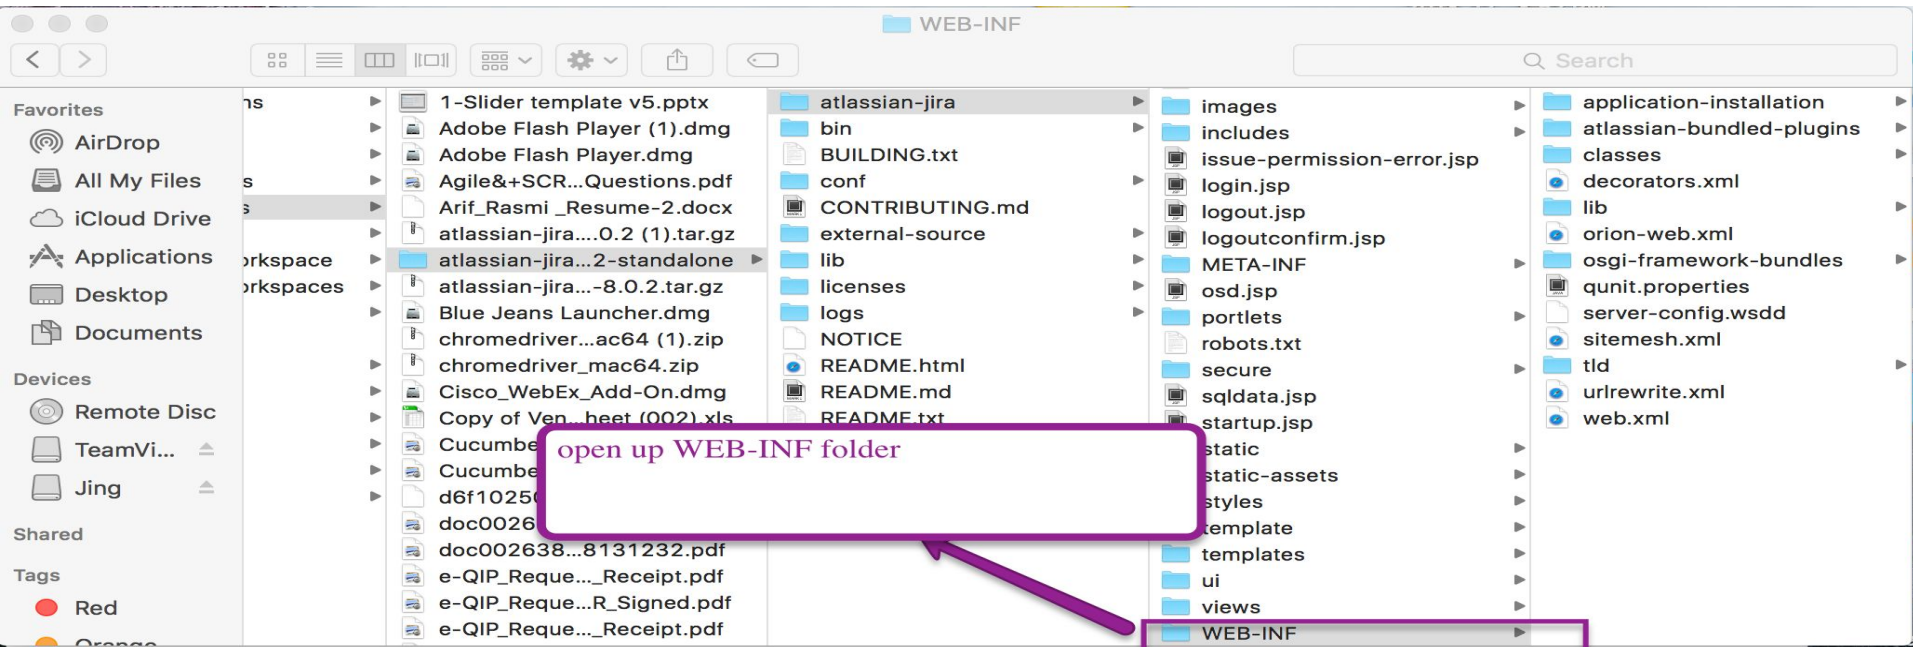

Go back to your Finder(File Explorer)

Go back to your file explorer(Finder) and go back to downloads and go to atlassian-jira folder

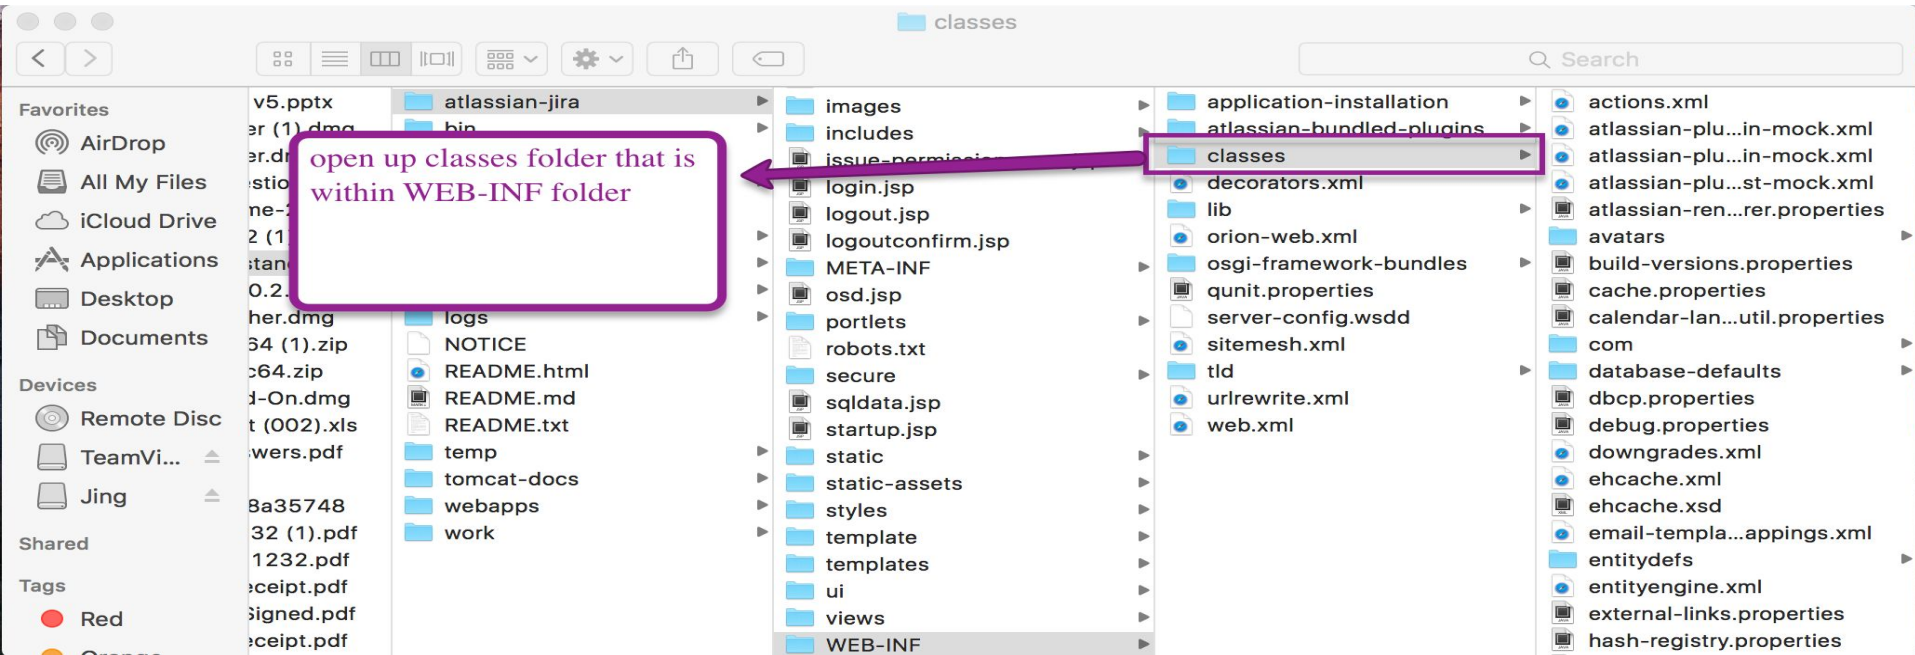

Open up WEB-INF folder

Scroll until you see WEB-INF folder and then go into the folder

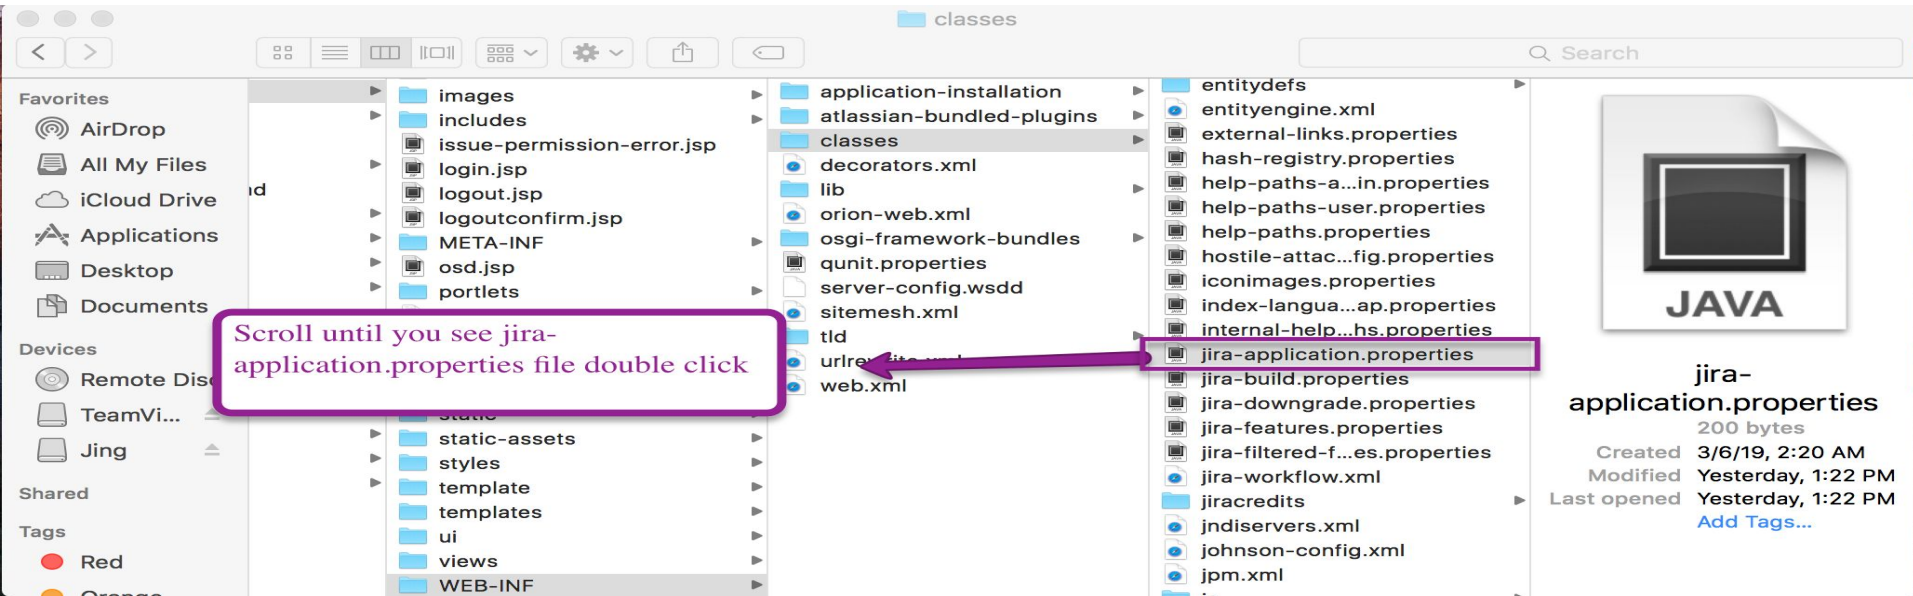

Find Classes Folder in WEB-INF

Once your in WEB-INF you need to scroll until you see classes folder

Open up Jira-application.properties

Scroll until you see Jira-application.properties, right click and open with, and choose your text editor(Sublime)

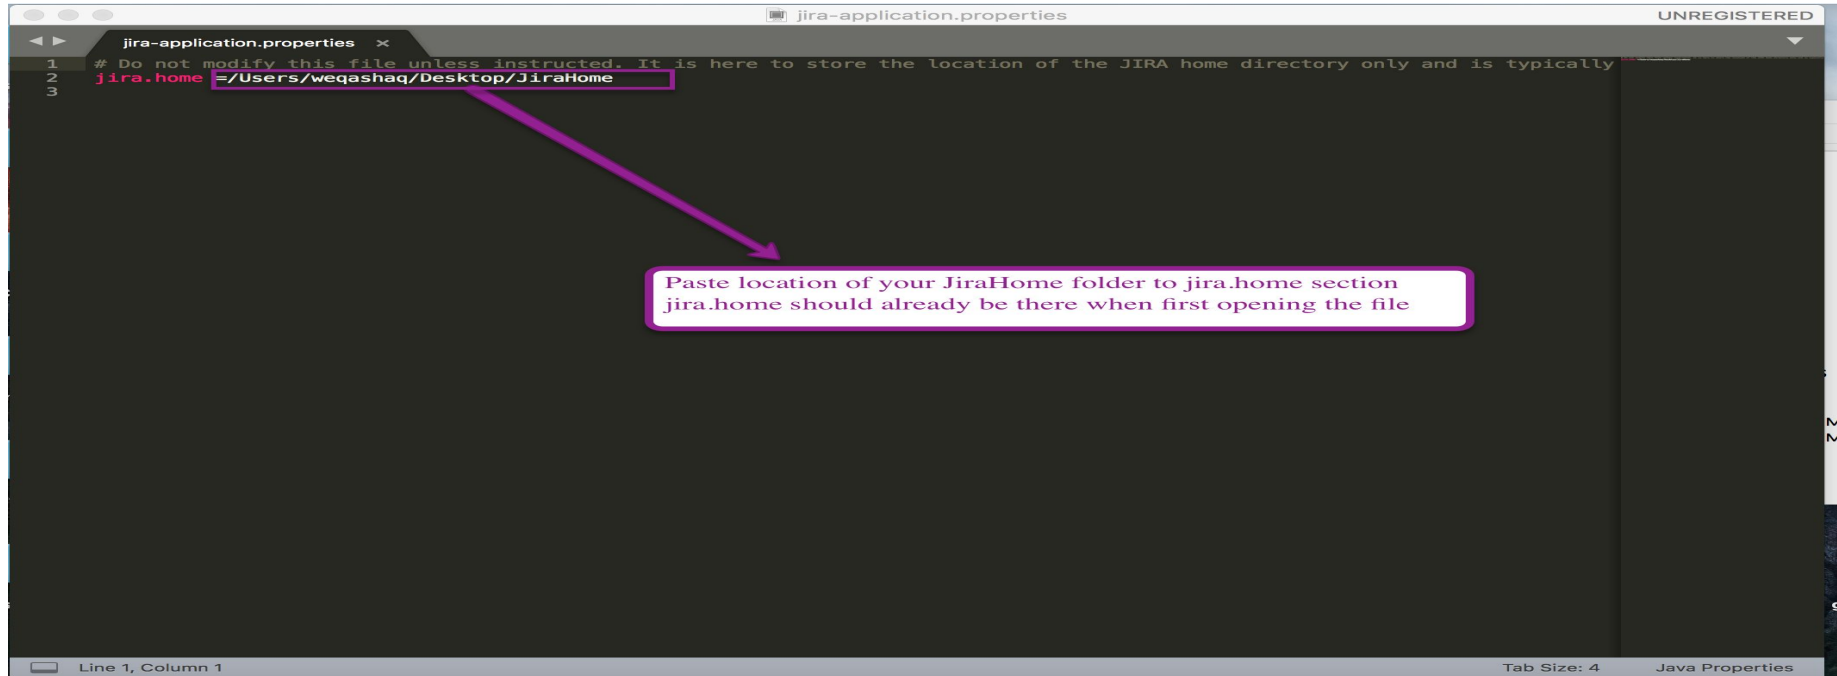

Go to Desktop

Go back to your desktop and create a folder named JiraHome

Go back to jira-application.properties

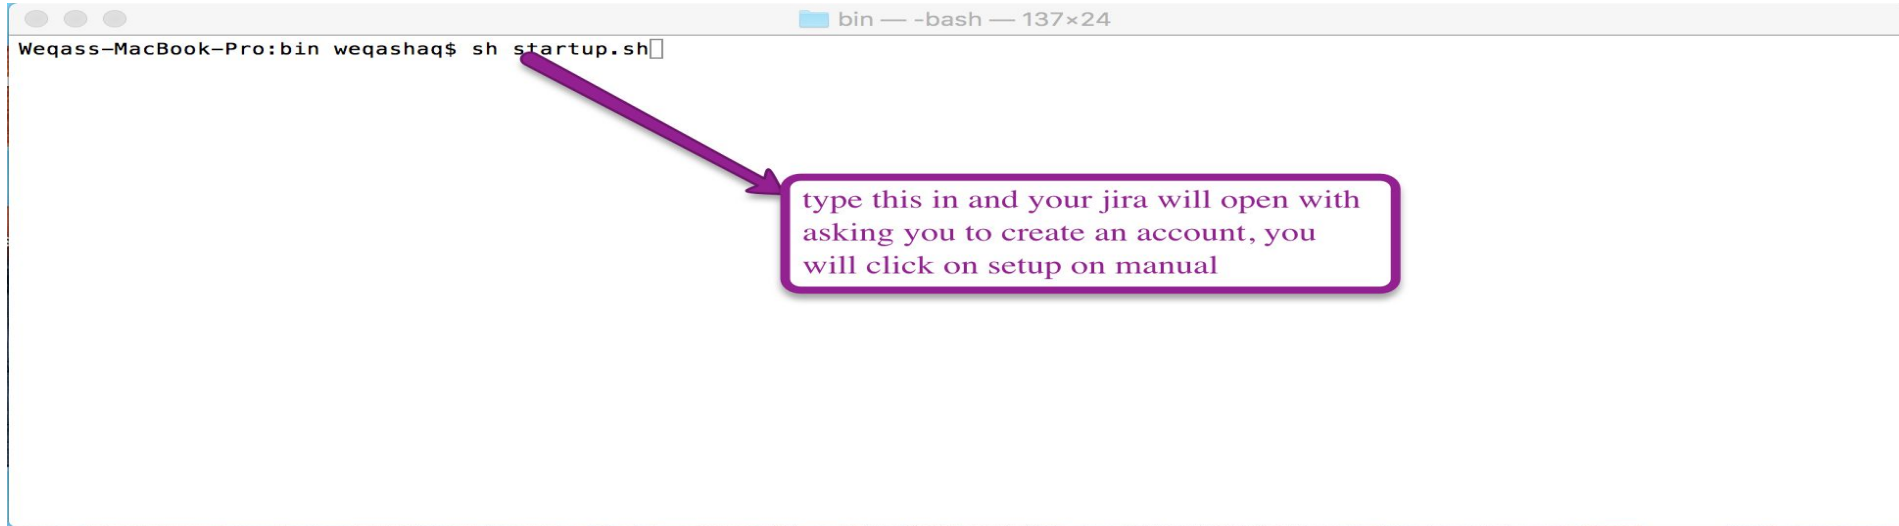

Go back to your jira-application.properties since it is open, paste your JiraHome folder location to your jira.home and save it then you may close it.

Go back to terminal and Start the instance of Jira

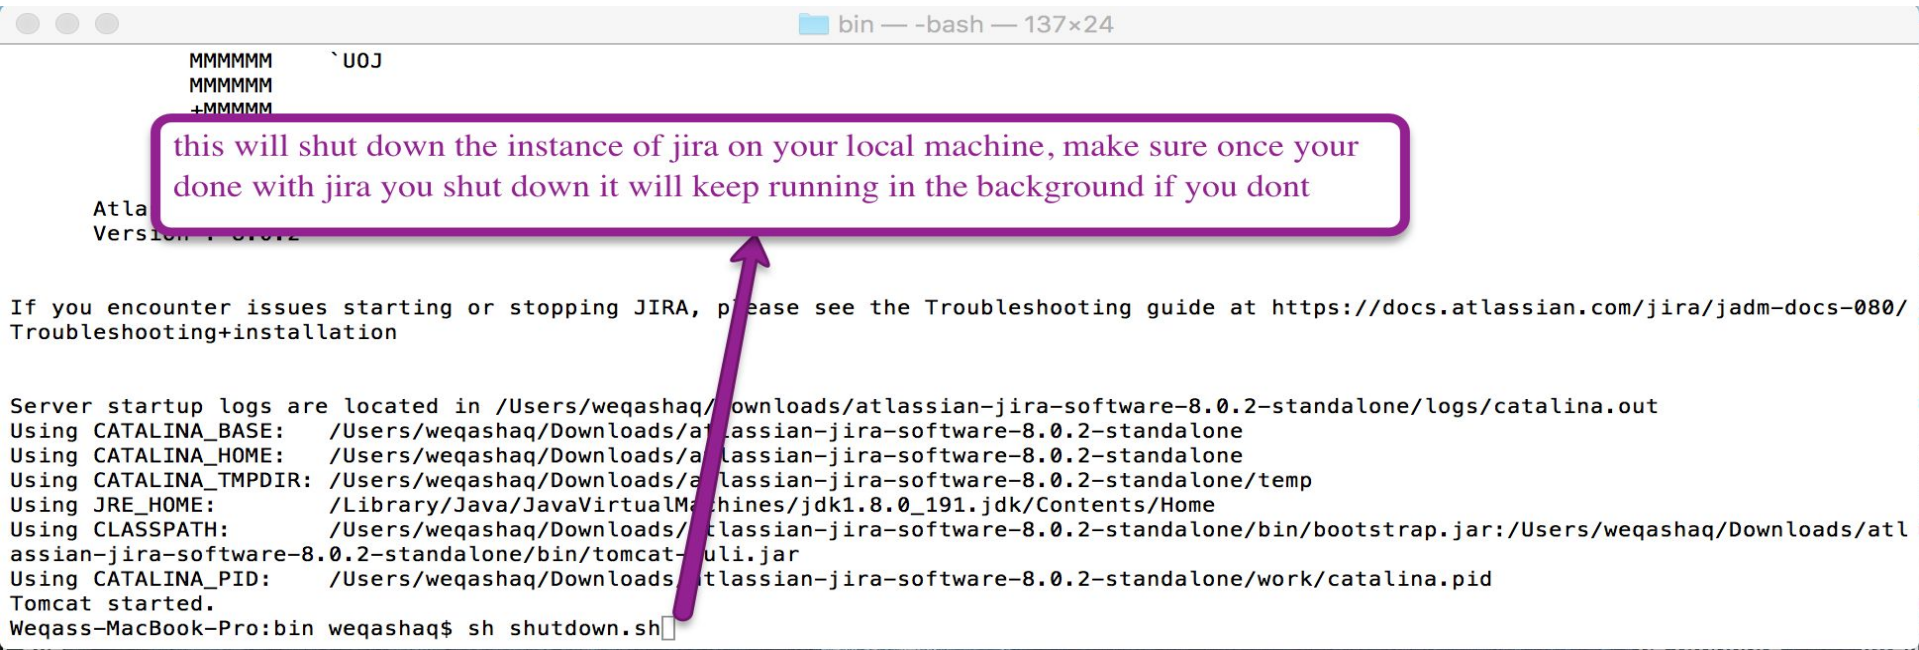

Make sure you are in bin folder and type the following `sh startup.sh`

This will start up jira onto your local machine

To Shutdown Jira instance

To shut down the instance of jira you have to type in sh shutdown.sh to stop the current instance of jira

```
bin — -bash — 137x24

MMMMMM  `UOJ
MMMMMM
+MMMMM

this will shut down the instance of jira on your local machine, make sure once your
done with jira you shut down it will keep running in the background if you dont

Atla
Version 8.0.2

If you encounter issues starting or stopping JIRA, please see the Troubleshooting guide at https://docs.atlassian.com/jira/jadm-docs-080/
