# Configure TestNG in Eclipse

- There are few standard steps to setup the TestNG in Eclipse. Please follow the below-mentioned steps to set up the TestNG in Eclipse if already not configured.
- 1. Launch your Eclipse IDE.
- 2. Click on "**Help**" menu and Select the option "**Install New Software**".
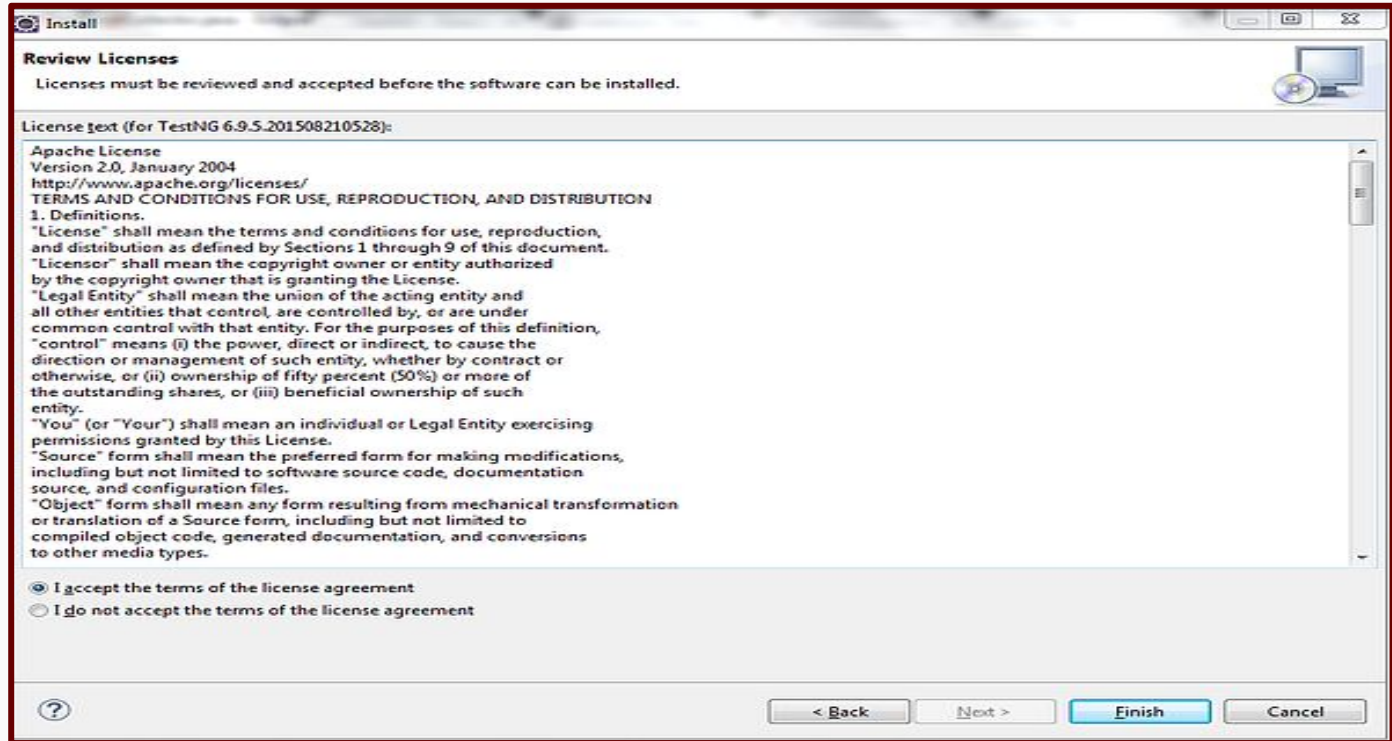

3. Now a dialog window will open. Here click on the "**Add**" button

- 4. New dialog window will open. Here enter the Name (Any Name as you wish) and enter the url
- **"http://beust.com/eclipse"** in the location and click on OK button.

5. It will render you on Accept licence window. Now accept the licence and click on "**Finish**" button.

- 6. Now downloading and installation will start. It may take some time depends on your internet speed.
- 7. In between it will show you the security warning. Accept this warning and click on "**OK**" button.
- 8. In last step, it will ask to restart the Eclipse. Accept the alert message and click on "**OK**" button. Now your eclipse will restart and TestNG has installed in your eclipse successfully.
- To confirm the installation, You can right click on any available class in your project. Hover the mouse on "**Run As...**" option. It will show you TestNG option to execute your class.
